A method of vinylation of compounds containing a free hydroxyl group was developed. A series of polymerizing substances was prepared which includes new vinyl ethers, for instance, the vinyl ethers of glycerin. In bromination of vinyl ethers a pronounced tendency to polymerization and condensation of these ethers was observed simultaneously with the reaction of direct addi-

DESCRIPTORS: *Acetylene derivatives, Synthesis, Production, Chemical industry, USSR, Rubber, Isoprene.

A general review is given of research on acetylene derivatives based on observations originally made as early as 1888 and 1900. Acetylene alcohols are formed by condensation of acetylene or vinylacetylene and ketones in the presence of anhydrous potassium hydroxide. Their polymers are good film-forming materials. Electrolytic hydrogenation of acetylene alcohols in soda solution gives olefinic alcohols which can be dehydrated (Engineering--Chemical, TT, v. 6, no. 9) (over)
